Indicator 7: Information Support

**Key question:** Are comprehensive Information, Education and Communication (IEC) strategies for improving infant and young child feeding (breastfeeding and complementary feeding) being implemented? (See: Annex 7.1, 7.2)

**Background:**
Women and carers having the right to appropriate and objective support and information, education and communication (IEC) strategies are important aspects of a comprehensive programme to improve infant and young child feeding practices.

However, because such programmes are expensive and often take place within a commercial context, they tend to attract inappropriate funding, for example, from the baby feeding industry. This can undermine the effectiveness of any campaign and lead to unwise decision making.

The first crucial step in an information strategy should be to ensure that baby feeding industry influence of such messaging is kept to an absolute minimum. IEC approaches may include the use of electronic (TV, radio, video), print (posters, counseling cards, flip charts, manuals, newspapers, magazines), interpersonal (counseling, group education, support groups) and community activities to communicate important information and motivational material to mothers, families and the community.

Information strategies are more likely to lead to positive behavior change if they are supported by counseling sessions, home visits, action-oriented group discussions and dramas focused on problem solving. IEC strategies are comprehensive when they ensure that all information channels convey concise, consistent, appropriate, action-oriented messages to targeted audiences at national, facility, community and family levels.

**Possible Sources of Information:**
- Interviews can be held with representatives of national communication or information agencies, national TV and radio stations, officials of the Ministry of Health such as the National Breastfeeding (or Infant and Young Child Feeding) Coordinator/Committees, nutrition and health education officers, Ministry of Women and Child development /Social Welfare officials, and representatives of UNICEF, WHO and NGOs.
- Consider reviewing samples of electronic media spots and printed material, and observing counseling, education and community media events.
